

Score Interpretation Guide:

The Child Assessment Data Dashboard includes data from the following measures:

Preschool Language Scale, 5th Edition (PLS-5): the PLS-5 is a comprehensive developmental language assessment with items that range from pre-verbal, interaction-based skills to emerging language to early literacy. The PLS-5 is administered at age 2 and 3 years old, and in fall and spring with children age 4 and up.

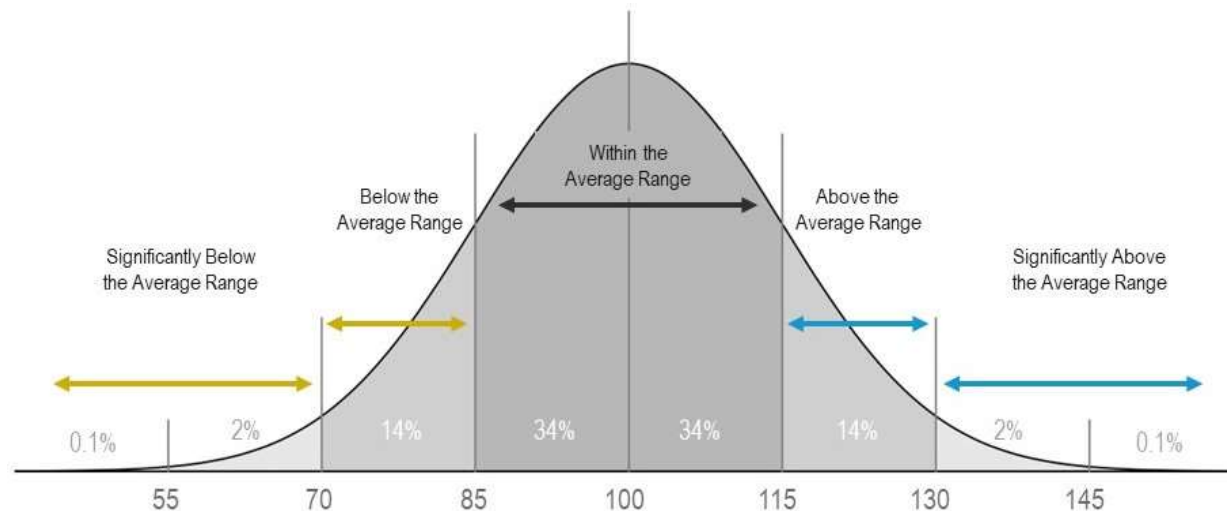

* Children whose primary language is Spanish are administered the bilingual version of the PLS-5. Questions are first asked in Spanish, then any questions they responded to incorrectly in Spanish are asked in English. Children may continue to answer more questions in English until the ceiling is met (6 consecutive incorrect responses).

Devereux Early Childhood Assessment (DECA): the DECA is a measure of social-emotional development rated by both teachers and parents in fall and spring. It includes the following scales:

- **Initiative:** assesses the child's ability to use independent thought and actions to meet her or his needs.
- **Attachment/Relationships:** assesses the mutual, strong, long lasting relationship between the child and significant adults such as family members and teachers.
- **Self-Regulation:** assesses the child's ability to gain control of and manage emotions, and sustain focus and attention.
* This scale is only present on the Toddler (18-36 months) and Preschool (36-60 months) versions of the form.
- **Total Protective Factors:** is a composite of the above scales and provides an overall indication of the strength of the child's protective factors.
- **Behavior Concerns:** measures a wide variety of problem or challenging behaviors.
* This scale is only present on the Preschool (36-60 months) version of the form.

Infant-Toddler Literacy Assessment (ITLA): the ITLA assesses pre-literacy behaviors in infants and toddlers (1-42 months). It is rated by teachers in fall and spring on three sections. 1) Communication: Social/Literate Language, 2) Print/Book Awareness, and 3) Routine, Rhymes, and Social Games.

All scores reported are Standard Scores, which are based on a national comparison of other children the same age.

Scores between 85 to 115 indicate typical development. Scores higher than 115 indicate strengths, while scores lower than 85 indicate areas for growth.
